

Descriptives: combined_9_28_26

The full medical-device 10-K/10-Q panel (one row per filing) with FDA product events and event 8-Ks merged in by gvkey × reporting year × reporting quarter.

Source: `data/combined_9_28_26.csv`.

Built by `scripts/18_build_combined_filing_event_dataset.py`.

Overview

Statistic	Value
Filings = firm reporting quarters (rows)	8,048
10-K	2,026
10-Q	6,022
Firms (gvkey)	142
Reporting periods ending	2004-10-31 to 2026-08-15
Filings with a parsed MD&A section	7,603
Filings with a warning letter in the quarter	139
Filings with a recall in the quarter	1,774
Filings with an adverse-event report in the quarter	4,342
Filings with no product event of any type in the quarter	3,413
Filings with an event 8-K in the quarter	91

Unique filings with a SUBSTANTIVE mention of each event in the MD&A

Event substantively discussed in MD&A	10-K filings	10-Q filings	All filings	Share of all filings
Warning letter	153	591	744	9.2%
Recall (Part 806)	319	757	1,076	13.4%
Adverse event (Part 803)	125	183	308	3.8%
Any of the three (each filing once)	430	1,123	1,553	19.3%

Counts are unique filings (accession numbers) across the FULL baseline panel, MD&A section only (Item 7 in a 10-K, Item 2 in a 10-Q). 'Substantive' = at least one MD&A occurrence tied to an actual event (past-tense receipt/action verb, definite reference, or specific date) and not hedged by a modal - script 17's definition. A filing can count under more than one event type.

Substantive MD&A disclosure: quarters WITH vs WITHOUT the event

Event type	Filings: event in quarter	... substantive MD&A	Rate	Filings: no event in quarter	... substantive MD&A	Rate
Warning letter *	136	50	36.8%	6,325	594	9.4%
Recall (Part 806)	1,774	432	24.4%	6,274	644	10.3%
Adverse event (Part 803)	4,342	206	4.7%	3,706	102	2.8%

*Raw rates, no controls - descriptive only. 'Event in quarter' = at least one event of that type dated inside the filing's own reporting period. Discussion in a no-event quarter is mostly the continuing discussion of an EARLIER quarter's event, so the right-hand rate is not a clean counterfactual. * Warning-letter row uses only filings whose whole period falls on/after 2008-10-01, when FDA's letter data begins; earlier filings have letters UNOBSERVED, not absent, and are excluded rather than counted as no-event.*

Substantive MD&A disclosure at the YEARLY (10-K) level: fiscal years WITH vs WITHOUT the event

Event type	10-Ks: event in fiscal year	... substantive MD&A	Rate	10-Ks: no event in fiscal year	... substantive MD&A	Rate
Warning letter *	121	32	26.4%	1,441	99	6.9%
Recall (Part 806)	750	160	21.3%	1,276	159	12.5%
Adverse event (Part 803)	1,244	92	7.4%	782	33	4.2%

10-K filings only. 'Event in fiscal year' = at least one event of that type dated anywhere inside the fiscal year the 10-K covers (previous 10-K's period end to this one's; all four quarters, not just Q4). Raw rates, no controls. * Warning-letter row uses only filings whose whole period falls on/after 2008-10-01, when FDA's letter data begins; earlier filings have letters UNOBSERVED, not absent, and are excluded rather than counted as no-event.

Event 8-Ks by event type

8-K event type	Documents (forms + exhibits)	Unique 8-Ks	... at baseline- panel firms	... merged to a reporting quarter	Filings (quarters) with such an 8-K
Warning letter	151	115	73	68	66
Recall (Part 806)	72	62	28	27	26
Adverse event (Part 803)	7	6	5	5	5
Any event (each 8-K once)	222	176	100	94	91

Source: the device 8-K dataset (script 16), classified on the filing lead. One 8-K can carry several documents (form + exhibits) and more than one event flag. Only 8-Ks filed by firms in the 10-K/10-Q baseline panel can merge; an 8-K is placed by its reported event date.

Product event dates (the events themselves - no filings involved)

Event type - scope	Events	Distinct firm-dates	Firms	First event date	Last event date
Warning letter - all gvkey-linked firms	206	200	117	2008-10-21	2026-01-29
Warning letter - firms in the 10-K/10-Q panel	164	159	91	2008-10-21	2026-01-29
Warning letter - merged to a reporting quarter	147	142	81	2008-10-21	2026-01-29
Recall (Part 806) - all gvkey-linked firms	19,077	6,546	118	2000-04-11	2026-06-30
Recall (Part 806) - firms in the 10-K/10-Q panel	14,834	5,001	95	2000-04-11	2026-06-30
Recall (Part 806) - merged to a reporting quarter	12,140	3,985	88	2004-08-17	2026-06-30
Adverse event (Part 803) - all gvkey-linked firms	10,571,163	239,588	214	1991-12-31	2026-06-30
Adverse event (Part 803) - firms in the 10-K/10-Q panel	10,140,038	197,362	133	1991-12-31	2026-06-30
Adverse event (Part 803) - merged to a reporting quarter	8,215,715	128,659	126	2004-09-03	2026-06-30

Counted from the FDA source data. Event = one warning letter (unique Case ID, dated by action date), one recall record (dated when the firm initiated it), one adverse-event report (dated when FDA received it). 'Distinct firm-dates' counts each firm x calendar date once. Events not merged belong to firms outside the 10-K/10-Q panel, predate the firm's first filing in it (the panel starts in 2005; MAUDE in 1991), postdate its last, or fall in a gap between filings.

Industry coverage: panel share of the US publicly traded medical-device industry

Statistic	Value
Firms in the 10-K/10-Q panel	142
in the US medical-device universe (counted in the share)	44
no current market cap (acquired, delisted or private since)	63
current market cap, but primary SIC outside 3841-3845	35
device SIC, but not listed on a US exchange (OTC or foreign-listed)	0
memo: counted in the share but incorporated outside the US	3
US medical-device universe, firms	172
Panel firms as a share of universe firms	25.6%
Share of US medical-device market capitalization	85.6%
Market cap of panel firms in the universe (\$M), mean	25,600
Market cap of panel firms in the universe (\$M), median	3,539
Total assets of panel firms in the universe (\$M), mean	11,359
Total assets of panel firms in the universe (\$M), median	2,646
Fiscal year-ends at which market cap is measured	2025-06-30 to 2026-06-30

Share = current market capitalization of the panel firms that are in the US medical-device universe, divided by the universe total. Universe: Compustat firms listed on a US stock exchange (NYSE, NYSE American, NASDAQ or a US regional exchange; OTC-quoted firms excluded), whatever their country of incorporation, with primary SIC 3841-3845 and a computable market cap (fiscal year-end price $\times$ shares outstanding) at their latest fiscal year-end on or after 2025-06-30. Same as Table 1 of 2026-07-06 except that US LISTING replaces US incorporation, so foreign-incorporated US filers such as Medtronic plc count on both sides of the ratio. It is a CURRENT snapshot: panel firms acquired or delisted since they entered the sample contribute nothing, nor do panel firms whose primary SIC is outside the device codes, however large - so the share understates the panel's historical coverage. Source: Compustat (comp.company, comp.funda) via WRDS.

Caveats

1. Reporting year/quarter is the calendar year and quarter of the period end (snapped to the nearest month end) - a label for the firm's reporting period, not its own fiscal-quarter number. A 10-K row is the fiscal 4th quarter.
2. An event is attached ONLY to the quarter it is dated in. Firms keep discussing a warning letter for years, so lagged/cumulative event indicators are needed before reading the no-event rate as a counterfactual.
3. Adverse-event reports arrive almost every quarter at large firms, so event_adverse_event has little variation there; use the counts (n_adverse_event, and n_mdr_tier_a / n_mdr_tier_b separately - Tier B is parent-prefix name matching).
4. Events use script 14's ownership-window gate but NOT its comp.funda gate; compustat_active_year flags the firm-years that gate would keep.
5. Only Risk Factors and MD&A are parsed (script 17); event discussion located only in Legal Proceedings (Item 3) is missed.
